Gödel's Incompleteness Theorems

Lawrence C. Paulson

October 10, 2017

Abstract

Gödel's two incompleteness theorems [2] are formalised, following a careful presentation by Świerczkowski [3], in the theory of hereditarily finite sets. This represents the first ever machine-assisted proof of the second incompleteness theorem. Compared with traditional formalisations using Peano arithmetic [1], coding is simpler, with no need to formalise the notion of multiplication (let alone that of a prime number) in the formalised calculus upon which the theorem is based. However, other technical problems had to be solved in order to complete the argument.

1.2.5 The proof system

This arbitrary additional axiom generalises the statements of the incompleteness theorems and other results to any formal system stronger than the HF theory. The additional axiom could be the conjunction of any finite number of assertions. Any more general extension must be a form that can be formalised for the proof predicate.

lemma *subst-fm-in-se-fm*: *se-fm A* ⟹ *se-fm* (*A*(*k*::=*x*))
by (*nominal-induct avoiding*: *k x rule*: *se-fm.strong-induct*) (*auto*)

4.6.2 Preparation

To begin, we require some facts connecting quantification and ground terms.

lemma *obtain-const-tm*: **obtains** *t* **where** ⟦*t*⟧*e* = *x ground t*
proof (*induct x rule*: *hf-induct*)
 case *0* **thus** *?case*
  by (*metis ground-aux-simps*(*1*) *eval-tm.simps*(*1*))
next
 case (*hinsert y x*) **thus** *?case*
  by (*metis ground-aux-simps*(*3*) *eval-tm.simps*(*3*))
qed

lemma *ex-eval-fm-iff-exists-tm*:
 eval-fm e (*Ex k A*) ⟷ (∃ *t*. *eval-fm e* (*A*(*k*::=*t*)) ∧ *ground t*)

by (*auto simp*: *eval-subst-fm*) (*metis obtain-const-tm*)

In a negative context, the formulation above is actually weaker than this one.

lemma *ex-eval-fm-iff-exists-tm'*:
eval-fm e (*Ex k A*) ⟷ (∃ *t*. *eval-fm e* (*A*(*k*::=*t*)))
by (*auto simp*: *eval-subst-fm*) (*metis obtain-const-tm*)

A ground term defines a finite set of ground terms, its elements.

nominal-function *elts* :: *tm* ⇒ *tm set* **where**
elts Zero = {}
| *elts* (*Var k*) = {}
| *elts* (*Eats t u*) = *insert u* (*elts t*)
by (*auto simp*: *eqvt-def elts-graph-aux-def*) (*metis tm.exhaust*)

nominal-termination (*eqvt*)
by *lexicographic-order*

lemma *eval-fm-All2-Eats*:
atom i ♯ (*t*,*u*) ⟹
eval-fm e (*All2 i* (*Eats t u*) *A*) ⟷ *eval-fm e* (*A*(*i*::=*u*)) ∧ *eval-fm e* (*All2 i t A*)
by (*simp only*: *ex-eval-fm-iff-exists-tm' eval-fm.simps*) (*auto simp*: *eval-subst-fm*)

The term *t* must be ground, since *elts* doesn't handle variables.

lemma *eval-fm-All2-Iff-elts*:
ground t ⟹ *eval-fm e* (*All2 i t A*) ⟷ (∀ *u* ∈ *elts t*. *eval-fm e* (*A*(*i*::=*u*)))
