

Inner Structure, Determinism and Modal Algebra of Multirelations

Walter Guttmann and Georg Struth

March 17, 2025

Abstract

Binary multirelations form a model of alternating nondeterminism useful for analysing games, interactions of computing systems with their environments or abstract interpretations of probabilistic programs. We investigate this alternating structure in a relational language based on power allegories extended with specific operations on multirelations. We develop algebras of modal operators over multirelations, related to concurrent dynamic logics, in this language.

The theories formally verify results in [3, 1, 2]. See these papers for further details and related work.

The basic algebra of homogeneous binary multirelations is formalised in [4]. The present theories consider heterogeneous binary multirelations, which may have different source and target sets. While homogeneous multirelations arise as a special case where source and target sets coincide, we do not attempt to generalise the algebras of [4] to the heterogeneous case but study new concepts instead. Thus the present theories and [4] are complementary. A unification of the two approaches based on category theory is possible future work.

Algebraic structures for multirelations with Parikh composition are formalised in [5].

1 Properties of Binary Relations

theory *Relational-Properties*

imports *Main*

begin

This is a general-purpose theory for enrichments of Rel, which is still quite basic, but helpful for developing properties of multirelations.

notation *relcomp* (**infixl** $\langle;\rangle$ 75)

notation *converse* ($\langle\cdot,\cdot\rangle$ [1000] 999)

type-synonym $('a,'b) \text{ rel} = ('a \times 'b) \text{ set}$

lemma *modular-law*: $R ; S \cap T \subseteq (R \cap T ; S^\sim) ; S$
 $\langle \text{proof} \rangle$

lemma *compl-conv*: $-(R^\sim) = (-R)^\sim$
 $\langle \text{proof} \rangle$

definition *top* :: $('a,'b) \text{ rel}$ **where**
 $\text{top} = \{(a,b) \mid a \ b. \text{ True}\}$

abbreviation *neg R* $\equiv Id \cap -R$

1.1 Univalence, totality, determinism, and related properties

definition *univalent* :: $('a,'b) \text{ rel} \Rightarrow \text{bool}$ **where**
 $\text{univalent } R = (R^\sim ; R \subseteq Id)$

```

definition total :: ('a,'b) rel  $\Rightarrow$  bool where
  total R = (Id  $\subseteq$  R ; R $^{\sim}$ )

definition injective :: ('a,'b) rel  $\Rightarrow$  bool where
  injective R = (R ; R $^{\sim}$   $\subseteq$  Id)

definition surjective :: ('a,'b) rel  $\Rightarrow$  bool where
  surjective R = (Id  $\subseteq$  R $^{\sim}$  ; R)

definition deterministic :: ('a,'b) rel  $\Rightarrow$  bool where
  deterministic R = (univalent R  $\wedge$  total R)

definition bijective :: ('a,'b) rel  $\Rightarrow$  bool where
  bijective R = (injective R  $\wedge$  surjective R)

lemma univalent-set: univalent R = ( $\forall$  a b c. (a,b)  $\in$  R  $\wedge$  (a,c)  $\in$  R  $\longrightarrow$  b = c)
   $\langle proof \rangle$ 

  Univalent relations feature as single-valued relations in Main.

lemma univ-single-valued: univalent R = single-valued R
   $\langle proof \rangle$ 

lemma total-set: total R = ( $\forall$  a.  $\exists$  b. (a,b)  $\in$  R)
   $\langle proof \rangle$ 

lemma total-var: total R = (R ; top = top)
   $\langle proof \rangle$ 

lemma deterministic-set: deterministic R = ( $\forall$  a .  $\exists$ !B . (a,B)  $\in$  R)
   $\langle proof \rangle$ 

lemma deterministic-var1: deterministic R = (R ; -Id = -R)
   $\langle proof \rangle$ 

lemma deterministic-var2: deterministic R = ( $\forall$  S. R ; -S = -(R ; S))
   $\langle proof \rangle$ 

lemma inj-univ: injective R = univalent (R $^{\sim}$ )
   $\langle proof \rangle$ 

lemma injective-set: injective S = ( $\forall$  a b c. (a,c)  $\in$  S  $\wedge$  (b,c)  $\in$  S  $\longrightarrow$  a = b)
   $\langle proof \rangle$ 

lemma surj-tot: surjective R = total (R $^{\sim}$ )
   $\langle proof \rangle$ 

lemma surjective-set: surjective S = ( $\forall$  b.  $\exists$  a. (a,b)  $\in$  S)
   $\langle proof \rangle$ 

```

lemma *surj-var*: *surjective* $R = (R^\sim ; \text{top} = \text{top})$
 $\langle \text{proof} \rangle$

lemma *bij-det*: *bijective* $R = \text{deterministic } (R^\sim)$
 $\langle \text{proof} \rangle$

lemma *univ-relcomp*: *univalent* $R \implies \text{univalent } S \implies \text{univalent } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *tot-relcomp*: *total* $R \implies \text{total } S \implies \text{total } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *det-relcomp*: *deterministic* $R \implies \text{deterministic } S \implies \text{deterministic } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *inj-relcomp*: *injective* $R \implies \text{injective } S \implies \text{injective } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *surj-relcomp*: *surjective* $R \implies \text{surjective } S \implies \text{surjective } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *bij-relcomp*: *bijective* $R \implies \text{bijective } S \implies \text{bijective } (R ; S)$
 $\langle \text{proof} \rangle$

lemma *det-Id*: *deterministic* *Id*
 $\langle \text{proof} \rangle$

lemma *bij-Id*: *bijective* *Id*
 $\langle \text{proof} \rangle$

lemma *tot-top*: *total* *top*
 $\langle \text{proof} \rangle$

lemma *tot-surj*: *surjective* *top*
 $\langle \text{proof} \rangle$

lemma *det-meet-distl*: *univalent* $R \implies R ; (S \cap T) = R ; S \cap R ; T$
 $\langle \text{proof} \rangle$

lemma *inj-meet-distr*: *injective* $T \implies (R \cap S) ; T = R ; T \cap S ; T$
 $\langle \text{proof} \rangle$

lemma *univ-modular*: *univalent* $S \implies R ; S \cap T = (R \cap T ; S^\sim) ; S$
 $\langle \text{proof} \rangle$

1.2 Inverse image and the diagonal and graph functors

definition *Invim* :: $('a, 'b) \text{ rel} \Rightarrow 'b \text{ set} \Rightarrow 'a \text{ set}$ **where**

Invim $R = \text{Image} (R^\sim)$

definition $\Delta :: ('a, 'a) \text{ rel } (\langle \Delta \rangle)$ **where**
 $\Delta P = \{(p,p) \mid p. p \in P\}$

definition $\text{Grph} :: ('a \Rightarrow 'b) \Rightarrow ('a, 'b) \text{ rel}$ **where**
 $\text{Grph } f = \{(x,y). y = f x\}$

lemma $\text{Image-Grph} [\text{simp}]: \text{Image} \circ \text{Grph} = \text{image}$
 $\langle \text{proof} \rangle$

1.3 Relational domain, codomain and modalities

Domain and codomain (range) maps have been defined in Main, but they return sets instead of relations.

definition $\text{dom} :: ('a, 'b) \text{ rel} \Rightarrow ('a, 'a) \text{ rel}$ **where**
 $\text{dom } R = \text{Id} \cap R ; R^\sim$

definition $\text{cod} :: ('a, 'b) \text{ rel} \Rightarrow ('b, 'b) \text{ rel}$ **where**
 $\text{cod } R = \text{dom} (R^\sim)$

definition $\text{rel-fdia} :: ('a, 'b) \text{ rel} \Rightarrow ('b, 'b) \text{ rel} \Rightarrow ('a, 'a) \text{ rel}$ $(\langle(|\cdot|)\rangle [61,81] 82)$
where
 $|R\rangle Q = \text{dom} (R ; \text{dom } Q)$

definition $\text{rel-bdia} :: ('a, 'b) \text{ rel} \Rightarrow ('a, 'a) \text{ rel} \Rightarrow ('b, 'b) \text{ rel}$ $(\langle(\langle|\cdot|\cdot)\rangle [61,81] 82)$
where
 $\text{rel-bdia } R = \text{rel-fdia} (R^\sim)$

definition $\text{rel-fbox} :: ('a, 'b) \text{ rel} \Rightarrow ('b, 'b) \text{ rel} \Rightarrow ('a, 'a) \text{ rel}$ $(\langle(|\cdot|\cdot)\rangle [61,81] 82)$
where
 $|R]Q = \text{neg} (\text{dom} (R ; \text{neg} (\text{dom } Q)))$

definition $\text{rel-bbox} :: ('a, 'b) \text{ rel} \Rightarrow ('a, 'a) \text{ rel} \Rightarrow ('b, 'b) \text{ rel}$ $(\langle([|\cdot|])\rangle [61,81] 82)$
where
 $\text{rel-bbox } R = \text{rel-fbox} (R^\sim)$

lemma $\text{rel-bdia-def-var}: \text{rel-bdia} = \text{rel-fdia} \circ \text{converse}$
 $\langle \text{proof} \rangle$

lemma $\text{dom-set}: \text{dom } R = \{(a,a) \mid a. \exists b. (a,b) \in R\}$
 $\langle \text{proof} \rangle$

lemma $\text{dom-Domain}: \text{dom} = \Delta \circ \text{Domain}$
 $\langle \text{proof} \rangle$

lemma $\text{cod-set}: \text{cod } R = \{(b,b) \mid b. \exists a. (a,b) \in R\}$
 $\langle \text{proof} \rangle$

lemma *cod-Range*: $\text{cod} = \Delta \circ \text{Range}$
 $\langle \text{proof} \rangle$

lemma *rel-fdia-set*: $|R\rangle Q = \{(a,a) \mid a. \exists b. (a,b) \in R \wedge (b,b) \in \text{dom } Q\}$
 $\langle \text{proof} \rangle$

lemma *rel-bdia-set*: $\langle R | P = \{(b,b) \mid b. \exists a. (a,b) \in R \wedge (a,a) \in \text{dom } P\}$
 $\langle \text{proof} \rangle$

lemma *rel-fbox-set*: $|R| Q = \{(a,a) \mid a. \forall b. (a,b) \in R \rightarrow (b,b) \in \text{dom } Q\}$
 $\langle \text{proof} \rangle$

lemma *rel-bbox-set*: $[R] P = \{(b,b) \mid b. \forall a. (a,b) \in R \rightarrow (a,a) \in \text{dom } P\}$
 $\langle \text{proof} \rangle$

lemma *dom-alt-def*: $\text{dom } R = \text{Id} \cap R ; \text{top}$
 $\langle \text{proof} \rangle$
