The Myhill-Nerode Theorem Based on Regular Expressions

Chunhan Wu, Xingyuan Zhang and Christian Urban

December 14, 2021

Abstract

There are many proofs of the Myhill-Nerode theorem using automata. In this library we give a proof entirely based on regular expressions, since regularity of languages can be conveniently defined using regular expressions (it is more painful in HOL to define regularity in terms of automata). We prove the first direction of the Myhill-Nerode theorem by solving equational systems that involve regular expressions. For the second direction we give two proofs: one using tagging-functions and another using partial derivatives. We also establish various closure properties of regular languages.[1]

Contents

[1] Most details of the theories are described in the paper [2].

theory *Folds*
imports *Regular−Sets.Regular-Exp*
begin

1 "Summation" for regular expressions

To obtain equational system out of finite set of equivalence classes, a fold operation on finite sets *folds* is defined. The use of *SOME* makes *folds* more robust than the *fold* in the Isabelle library. The expression *folds f* makes sense when *f* is not *associative* and *commutitive*, while *fold f* does not.

definition
folds :: $('a \Rightarrow 'b \Rightarrow 'b) \Rightarrow 'b \Rightarrow 'a\ set \Rightarrow 'b$
where
folds f z S $\equiv$ *SOME x. fold-graph f z S x*

Plus-combination for a set of regular expressions

abbreviation
Setalt :: *'a rexp set* $\Rightarrow$ *'a rexp* ($\biguplus$ - [*1000*] *999*)
where
$\biguplus A \equiv$ *folds Plus Zero A*

For finite sets, *Setalt* is preserved under *lang*.

lemma *folds-plus-simp* [*simp*]:
fixes *rs*::(*'a rexp*) *set*
assumes *a*: *finite rs*
shows *lang* ($\biguplus$ *rs*) = $\bigcup$ (*lang* ‘ *rs*)

by (*auto simp*: *inj-on-def Derivs-def*)
with *assms*(*1*) **have** *infinite* ((λ*w*. *Derivs w A*) ‘ *B*)
by (*blast dest*: *finite-imageD*)
ultimately have *infinite* (*range* (λ*w*. *Derivs w A*)) **by** (*rule infinite-super*)
with *regular-Derivs-finite* **show** *?thesis* **by** *blast*
qed

lemma *not-regular-langI'*:
assumes *infinite B* $\bigwedge x\ y.\ x \in B \Longrightarrow y \in B \Longrightarrow x \neq y \Longrightarrow \exists\, w.\ \neg(f\ x\ @\ w \in A \longleftrightarrow f\ y\ @\ w \in A)$
shows $\neg$*regular-lang* (*A* :: *'a* :: *finite list set*)
proof (*rule not-regular-langI*)
from *assms*(*2*) **have** *inj-on f B* **by** (*force simp*: *inj-on-def*)
with ‹*infinite B*› **show** *infinite* (*f* ‘ *B*) **by** (*simp add*: *finite-image-iff*)
qed (*insert assms*, *auto*)

7.3 The Pumping Lemma

The Pumping lemma can be shown very easily from the Myhill–Nerode theorem: if we have a word whose length is more than the (finite) number of equivalence classes, then it must have two different prefixes in the same class and the difference between these two prefixes can then be “pumped”.

lemma *pumping-lemma-aux*:
fixes *A* :: *'a list set*
defines $\delta \equiv \lambda w.$ *Derivs w A*
defines $n \equiv$ *card* (*range* δ)
assumes $z \in A$ *finite* (*range* δ) *length* $z \geq n$
shows $\exists\, u\ v\ w.\ z = u\ @\ v\ @\ w \wedge$ *length* $(u\ @\ v) \leq n \wedge v \neq [] \wedge (\forall\, i.\ u\ @$ *repeat* $i\ v\ @\ w \in A)$
proof −
define *P* **where** *P* = *set* (*take* (*Suc n*) (*prefixes z*))
from ‹*length* $z \geq n$› **have** [*simp*]: *card P* = *Suc n*
unfolding *P-def* **by** (*subst distinct-card*) (*auto intro*!: *distinct-take*)
have *length-le*: *length* $y \leq n$ **if** $y \in P$ **for** *y*
using *length-take-prefixes*[*OF that* [*unfolded P-def*]] **by** *simp*

have *card* (δ ‘ *P*) $\leq$ *card* (*range* δ) **by** (*intro card-mono assms*) *auto*
also from *assms* **have** ... < *card P* **by** *simp*
finally have $\neg$*inj-on* δ *P* **by** (*rule pigeonhole*)
then obtain *a b* **where** *ab*: $a \in P\ b \in P\ a \neq b$ *Derivs a A* = *Derivs b A*
by (*auto simp*: *inj-on-def* δ*-def*)
from *ab* **have** *prefix-ab*: *prefix a z prefix b z* **by** (*auto simp*: *P-def dest*: *in-set-takeD*)
from *ab* **have** *length-ab*: *length* $a \leq n$ *length* $b \leq n$
by (*simp-all add*: *length-le*)

have $*$: *?thesis*
if *uz'*: *prefix u z' prefix z' z length z'* $\leq n$
$u \neq z'$ *Derivs z' A* = *Derivs u A* **for** *u z'*
proof −
from ‹*prefix u z'*› **and** ‹$u \neq z'$›
obtain *v* **where** *v* [*simp*]: $z' = u\ @\ v\ v \neq []$
by (*auto simp*: *prefix-def*)
from ‹*prefix z' z*› **obtain** *w* **where** [*simp*]: $z = u\ @\ v\ @\ w$
