The Divergence of the Prime Harmonic Series

Manuel Eberl

August 16, 2018

Abstract

In this work, we prove the lower bound $\ln(H_n) - \ln(\frac{5}{3})$ for the partial sum of the Prime Harmonic series and, based on this, the divergence of the Prime Harmonic Series $\sum_{p=1}^{n} [p \text{ prime}] \cdot \frac{1}{p}$. The proof relies on the unique squarefree decomposition of natural numbers. This proof is similar to Euler's original proof (which was highly informal and morally questionable). Its advantage over proofs by contradiction, like the famous one by Paul Erdős, is that it provides a relatively good lower bound for the partial sums.

3.1 Auxiliary equalities and inequalities

First of all, we prove the following result about rearranging a product over a set into a sum over all subsets of that set.

lemma *prime-harmonic-aux1*:
fixes A :: $'a$ :: *field set*
shows *finite* $A \Longrightarrow (\prod x{\in}A.\ 1 + 1 / x) = (\sum x{\in}Pow\ A.\ 1 / \prod x)$
proof (*induction rule*: *finite-induct*)
fix a :: $'a$ **and** A :: $'a$ *set*
assume a: $a \notin A$ **and** *fin*: *finite* A
assume *IH*: $(\prod x{\in}A.\ 1 + 1 / x) = (\sum x{\in}Pow\ A.\ 1 / \prod x)$
from a **and** *fin* **have** $(\prod x{\in}insert\ a\ A.\ 1 + 1 / x) = (1 + 1 / a) * (\prod x{\in}A.\ 1 + 1 / x)$ **by** *simp*
also from *fin* **have** $\ldots = (\sum x{\in}Pow\ A.\ 1 / \prod x) + (\sum x{\in}Pow\ A.\ 1 / (a * \prod x))$
by (*subst IH*) (*auto simp add*: *algebra-simps sum-divide-distrib*)
also from *fin a* **have** $(\sum x{\in}Pow\ A.\ 1 / (a * \prod x)) = (\sum x{\in}Pow\ A.\ 1 / \prod (insert\ a\ x))$
by (*intro sum.cong refl*, *subst prod.insert*) (*auto dest*: *finite-subset*)
also from a **have** $\ldots = (\sum x{\in}insert\ a\ `\ Pow\ A.\ 1 / \prod x)$
by (*subst sum.reindex*) (*auto simp*: *inj-on-def*)
also from *fin a* **have** $(\sum x{\in}Pow\ A.\ 1 / \prod x) + \ldots = (\sum x{\in}Pow\ A \cup insert\ a\ `\ Pow\ A.\ 1 / \prod x)$
by (*intro sum.union-disjoint* [*symmetric*]) (*simp*, *simp*, *blast*)
also have $Pow\ A \cup insert\ a\ `\ Pow\ A = Pow\ (insert\ a\ A)$ **by** (*simp only*: *Pow-insert*)
finally show $(\prod x{\in}insert\ a\ A.\ 1 + 1 / x) = (\sum x{\in}Pow\ (insert\ a\ A).\ 1 / \prod x)$.
qed *simp*

Next, we prove a simple and reasonably accurate upper bound for the sum of the squares of any subset of the natural numbers, derived by simple telescoping. Our upper bound is approximately 1.67; the exact value is $\frac{\pi^2}{6} \approx 1.64$.

(cf. Basel problem)

lemma *prime-harmonic-aux2*:
  assumes *finite* $(A :: nat\ set)$
  shows $(\sum k{\in}A.\ 1\ /\ (real\ k\ \hat{}\ 2)) \leq 5/3$

  finally show *?thesis* **by** − *simp*
qed

3.2 Estimating the partial sums of the Prime Harmonic Series

We are now ready to show our main result: the value of the partial prime harmonic sum over all primes no greater than n is bounded from below by the n-th harmonic number H_n minus some constant.

In our case, this constant will be $\frac{5}{3}$. As mentioned before, using a proof of the Basel problem can improve this to $\frac{\pi^2}{6}$, but the improvement is very small and the proof of the Basel problem is a very complex one.

The exact asymptotic behaviour of the partial sums is actually $\ln(\ln n) + M$, where M is the Meissel–Mertens constant (approximately 0.261).

theorem *prime-harmonic-lower*:
  assumes n: $n \geq 2$
  shows $(\sum p{\leftarrow}primes\text{-}upto\ n.\ 1\ /\ real\ p) \geq ln\ (harm\ n) - ln\ (5/3)$
proof −
  — the set of primes that we will allow in the squarefree part

We can use the inequality $\ln(n+1) \le H_n$ to estimate the asymptotic growth of the partial prime harmonic series. Note that $H_n \sim \ln n + \gamma$ where γ is the Euler–Mascheroni constant (approximately 0.577), so we lose some accuracy here.

  by (*simp add*: *Cauchy-Bseq convergent-Cauchy*)

We now use our last estimate to show that the prime harmonic series diverges. This is obvious, since it is bounded from below by $\ln(\ln(n + 1))$ minus some constant, which obviously tends to infinite.

Directly using the divergence of the harmonic series would also be possible and shorten this proof a bit..
