Abstract

We provide a formal framework for the theory of representations of finite groups, as modules over the group ring. Along the way, we develop the general theory of groups (relying on the *group_add* class for the basics), modules, and vector spaces, to the extent required for theory of group representations. We then provide formal proofs of several important introductory theorems in the subject, including Maschke's theorem, Schur's lemma, and Frobenius reciprocity. We also prove that every irreducible representation is isomorphic to a submodule of the group ring, leading to the fact that for a finite group there are only finitely many isomorphism classes of irreducible representations. In all of this, no restriction is made on the characteristic of the ring or field of scalars until the definition of a group representation, and then the only restriction made is that the characteristic must not divide the order of the group.

1 Preliminaries

In this section, we establish some basic facts about logic, sets, and functions that are not available in the HOL library. As well, we develop some theory for almost-everywhere-zero functions in preparation of the definition of the group ring.

1.1 Logic

lemma *conjcases* [*case-names BothTrue OneTrue OtherTrue BothFalse*] :
assumes *BothTrue*: $P \wedge Q \implies R$
and *OneTrue*: $P \wedge \neg Q \implies R$
and *OtherTrue*: $\neg P \wedge Q \implies R$
and *BothFalse*: $\neg P \wedge \neg Q \implies R$
shows R

1.2 Sets

lemma *empty-set-diff-single* : $A - \{x\} = \{\} \implies A = \{\} \vee A = \{x\}$
⟨*proof*⟩

lemma *seteqI* : $(\bigwedge a.\ a \in A \implies a \in B) \implies (\bigwedge b.\ b \in B \implies b \in A) \implies A = B$
⟨*proof*⟩

lemma *prod-ballI* : $(\bigwedge a\ b.\ (a,b) \in AxB \implies P\ a\ b) \implies \forall (a,b) \in AxB.\ P\ a\ b$
⟨*proof*⟩

lemma *good-card-imp-finite* : *of-nat* (*card A*) $\neq$ (*0*::'*a*::*semiring-1*) $\implies$ *finite A*

1.3 Lists

1.3.1 *zip*

lemma *zip-truncate-left* : *zip xs ys* = *zip* (*take* (*length ys*) *xs*) *ys*
⟨*proof*⟩

lemma *zip-truncate-right* : *zip xs ys* = *zip xs* (*take* (*length xs*) *ys*)
⟨*proof*⟩

Lemmas *zip-append1* and *zip-append2* in theory *HOL.List* have unnecessary *take* (*length* -) in them. Here are replacements.

lemma *zip-append-left* :
zip (*xs*@*ys*) *zs* = *zip xs zs* @ *zip ys* (*drop* (*length xs*) *zs*)

1.4.3 Convolution

definition *convolution* ::
$('a::group\text{-}add \Rightarrow 'b::\{comm\text{-}monoid\text{-}add,times\}) \Rightarrow ('a \Rightarrow 'b) \Rightarrow ('a \Rightarrow 'b)$
where *convolution f g*
$= (\lambda x.\ \sum y | x - y \in supp\ f \wedge y \in supp\ g.\ (f\ (x - y)) * g\ y)$
— More often than not, this definition will be used in the case that $'b$ is of class *mult-zero*, in which case the conditions $x - y \in supp\ f$ and $y \in supp\ g$ are obviously mathematically unnecessary. However, they also serve to ensure that the sum is taken over a finite set in the case that at least one of f and g is almost everywhere zero.

lemma *convolution-zero* :
fixes $f\ g :: 'a::group\text{-}add \Rightarrow 'b::\{comm\text{-}monoid\text{-}add,mult\text{-}zero\}$

2.7 The group ring

2.7.1 Definition and basic facts

Realize the group ring as the set of almost-every-zero functions from group to ring. One can recover the usual notion of group ring element by considering such a function to send group elements to their coefficients. Here the codomain of such functions is not restricted to some *Ring1* subset since we will not be interested in having the ability to change the ring of scalars for a group ring.

6 Representations of Finite Groups

6.1 Locale and basic facts

Define a group representation to be a module over the group ring that is finite-dimensional as a vector space. The only restriction on the characteristic of the field is that it does not divide the order of the group. Also, we don't explicitly assume that the group is finite; instead, the *good-char* assumption implies that the cardinality of G is not zero, which implies G is finite. (See lemma *good-card-imp-finite*.)
